# Review 2-Wheel Robots

## Last Week's Challenges

- Drive **1 meter**
- Drive in a **Square Pattern**
- Drive around in a **Triangle Pattern**

# Touch Sensors

## Touch Sensors Are Simple Push Buttons

- Can be used as a button or a trigger
- Can be used as a bumper limit switch
- Can be used to sense physical attributes in factory automation
- And anything else you can think of...

# Touch Sensors

## As a Button/Trigger

- Connect a Touch Sensor
- Remember:  
*Sensors connect to  
Number Ports*

# Touch Sensors

## As a Button/Trigger

- Look at Port View on EV3 Development Environment

# Touch Sensors

## As a Button/Trigger

- Now Let's Make a Simple Program

1) When Touch Sensor is Pushed,  
Show Some Picture

*Wait until touch sensor **pressed** block*

2) When Touch Sensor is Let Go,  
Clear Screen

*Wait until touch sensor **released** block*

**A POSTERIORI**

Play · Experience · Learn

# Touch Sensors

## As a Button/Trigger

- Here's a sample solution

- You can use this basic idea to make a silly sound machine (different keys trigger different sounds)

# Touch & Go

## As a Button/Trigger

- Make another Simple Program
  - When Touch Sensor is Pushed Drive FWD
  - When Touch Sensor is Let Go Stop

# Bumper Switch

- Connect Two Touch Sensors to Front of your Robot To Act as Bumper Switches

One Way Is Like This:

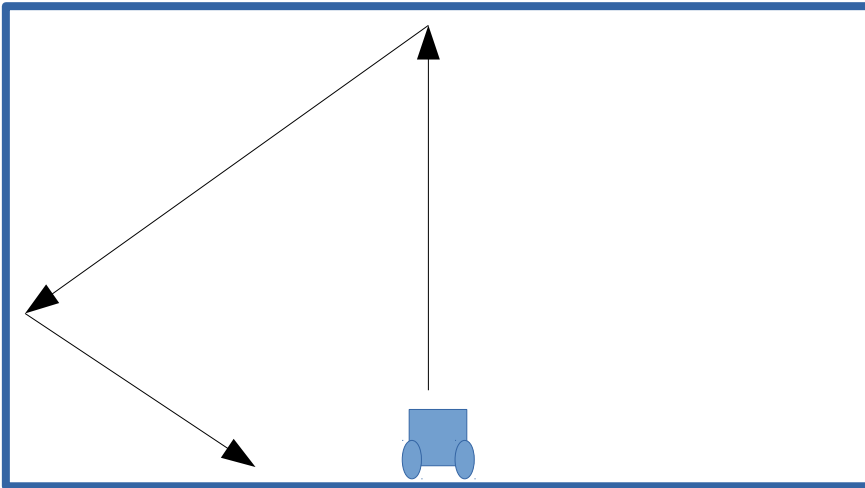

# Bumper Switch

- Test Sensor with Port View

# Bumper Switch

- Now, Make your Robot Behave Like a Roomba!
- In a loop
  - Move FWD
  - Until you hit one of the Bumpers
  - Then Backup and Turn around
  - Repeat...

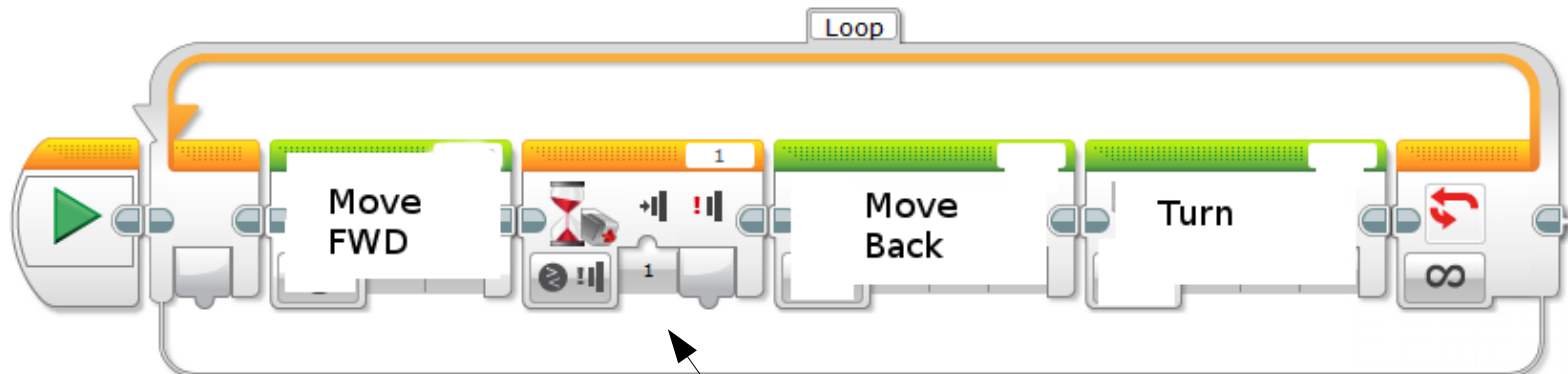

**A POSTERIORI**

Play · Experience · Learn

# Bumper Switch

- Now, Make your Robot Behave Like a Roomba!
- In a loop
  - Move FWD
  - Until you hit one of the Bumpers
  - Then Backup and Turn around
  - Repeat...

*Shouldn't matter which sensor gets tested.  
They should trigger at the same time.*

Watch your robot.  
What are some issues?

Take note of the problems you find, if any.

Then, try to change Robot design or Program to fix the issue.
