

# IR Proximity Sensor

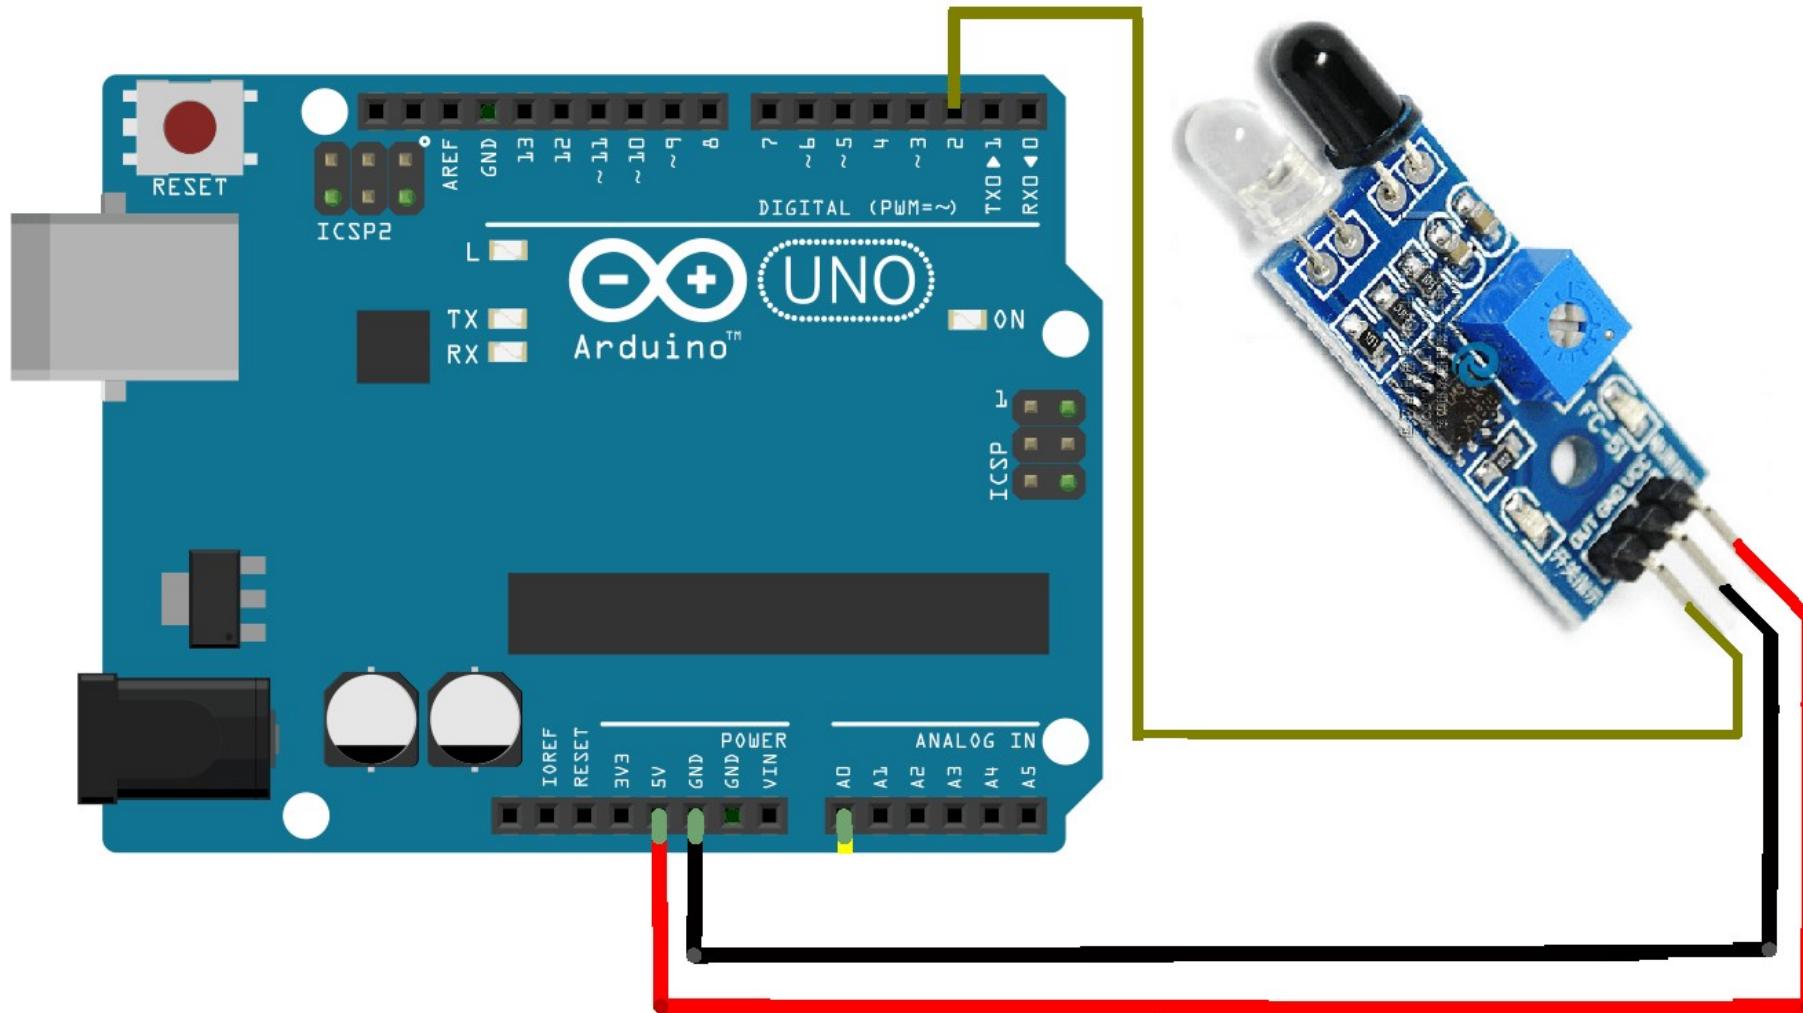

Potentiometer  
to set range

OBJECT

- Works by emitting IR and detecting reflection
- Range: 5-40cm (indoors)
- Use potentiometer to set sensitivity / range

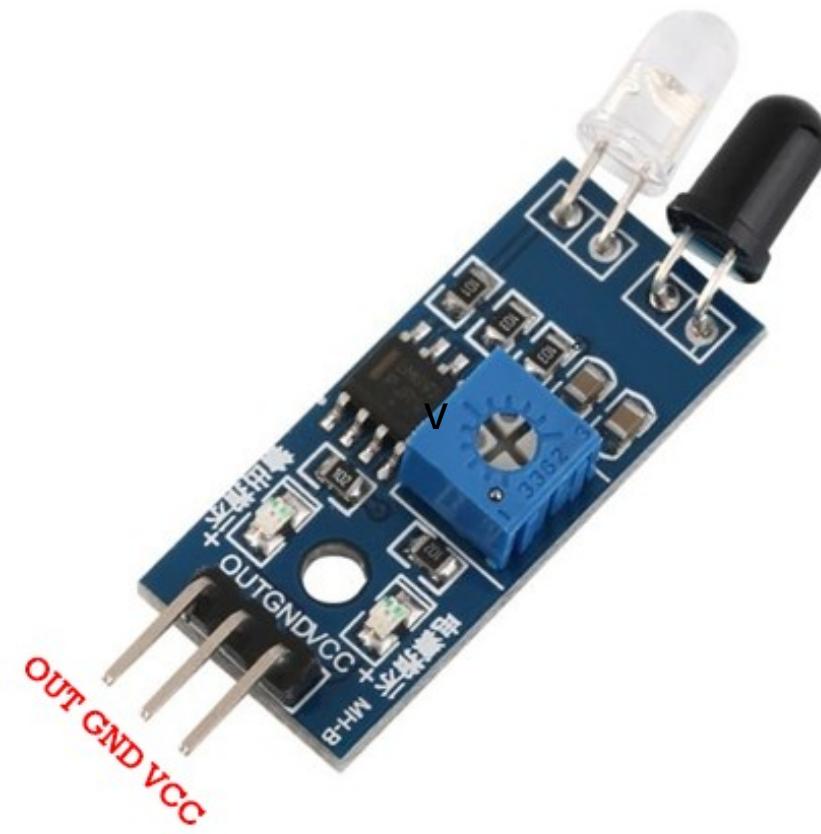

# IR Proximity Sensor

# IR Proximity Sensor

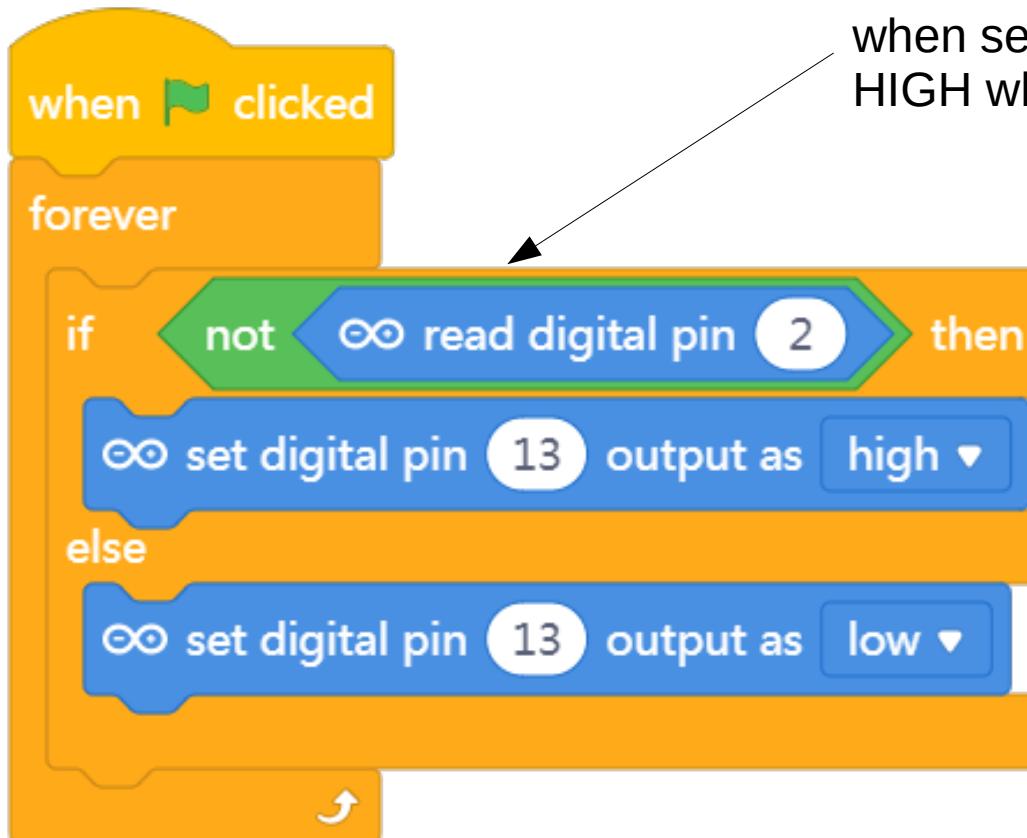

## Pins Connections

Sensor	Arduino
VCC	5V
GND	Gnd
OUT	Any I/O (Pin 2 to 12)

You can test sensor by plugging in power pins (GND/VCC).  
There is a test LED on the sensor that lights up when triggered.

# Sample Code

Note that the output is LOW when sensor senses proximity.  
HIGH when nothing's there...
